

Statistical Inference Overview

Jeffrey Leek Johns Hopkins Bloomberg School of Public Health

Statistical Inference Content

- · Basic probability
- · Likelihood
- · Common distributions
- · Asymptotics
- · Confidence intervals
- · Hypothesis tests
- · Power
- · Bootstrapping
- Non-parametric tests
- Basic bayesian statistics

Example

Suppose that the proportion of help calls that get addressed in a random day by a help line is given by

$$f(x) = \begin{cases} 2x & \text{for } 1 > x > 0 \\ 0 & \text{otherwise} \end{cases}$$

Is this a mathematically valid density?

The normal distribution

· A random variable is said to follow a **normal** or **Gaussian** distribution with mean μ and variance σ^2 if the associated density is

$$(2\pi\sigma^2)^{-1/2}e^{-(x-\mu)^2/2\sigma^2}$$

If X a RV with this density then $E[X] = \mu$ and $Var(X) = \sigma^2$

- We write $X \sim N(\mu, \sigma^2)$
- · When $\mu = 0$ and $\sigma = 1$ the resulting distribution is called **the standard normal distribution**
- The standard normal density function is labeled φ
- · Standard normal RVs are often labeled Z

Example bootstrap code
